

## BESS tender price in Finland 2026

How does Bess work in Finland? BESS operators can also participate in cross-border markets to provide storage capacity for ancillary services, such as frequency regulation, which helps maintain grid stability and reliability. Ancillary services are currently the primary revenue source for BESS in Finland. When will a Bess project start? Renewable Power Capital's first BESS site is planned to be operating in summer . Located in Uusikaupunki, Finland, the project will bring 50MW/100MWh of storage to the system. The timelines were confirmed alongside the announcement of key project partners that will see the delivery of the significant project to the Finnish energy system. Why does Finland need Bess? The need for BESS is exceptionally high in Finland because the country has set one of the world's most aggressive climate targets. The government has a legal obligation to reach carbon neutrality by . Renewable energy sources account for over 50% of electricity production, and several renewable projects are being planned or developed. When will the Kalanti 50MW Bess project start? Renewable Power Capital has signed the main construction/supply contracts for the Kalanti 50MW BESS facility and has confirmed that the construction works will start in March . The site will provide a 2-hour storage solution to the Finnish electricity Market. IMMEDIATE RELEASE - London 11 March GMT How many Bess projects are planned in ? For example, Finnish investment company Exilion achieved 40,700EUR/MW/month in the second half of . In , 113 MW BESS projects are expected to become operational, and 359 MW industrial-scale BESS projects have already been announced for the next five years (Elinkeinoel&#228;m&#228;n Keskusliitto, ). How will the Finnish government help to accelerate Bess investments? Moreover, the Finnish government is improving policy support with tax exemptions for certain green investments, including battery storage, to meet the climate targets. These policies will help to accelerate BESS investments further by making them even more attractive financially. The updated BESS development scenario leads to a high BESS penetration on all capacity reservation markets, including aFRR and mFRR. In consequence, for most markets, reservation prices drop in . The updated BESS development scenario leads to a high BESS penetration on all capacity reservation markets, including aFRR and mFRR. In consequence, for most markets, reservation prices drop in . Hundreds of megawatts of new capacity are expected to be commissioned in -, significantly impacting reservation prices in the near term. -: After , all primary reserve markets are expected to be saturated, shifting BESS operations from FCR-N towards FCR-D, aFRR and mFRR Investing in Battery Energy Storage Systems in Finland There is a global race towards meeting the climate goals of the Paris Agreement, and the fast adoption of renewable energy resources is the key to winning. However, the quick commissioning of wind and solar power into the grid poses challenges We provide information on the electricity market openly and free of charge. Electricity market participants need sufficiently and timely information for the market to function efficiently. As the transmission system operator, Fingrid possesses much information about the electricity market and the NTR also estimates the commissioning date for the Uusnivala BESS Project to be by mid-. The Fluence contract award was the last according to NTR as they have already "signed contracts with all key
