Beyond offering a greater ROI, solar batteries will also protect your home from blackouts, reduce your reliance on the grid, offer energy independence, and store unused solar energy for use when you need it most. Regular maintenance will allow your system to continue operating at its full capacity. The average ROI for solar panels ranges from 10 to 18% depending upon the location and size of the systems. The commercial projects often have higher percentage rates of solar returns than on average; thus, the what is an average ROI on commercial solar is often around 12 to 20%. The average ROI for solar panels ranges from 10 to 18% depending upon the location and size of the systems. The commercial projects often have higher percentage rates of solar returns than on average; thus, the what is an average ROI on commercial solar is often around 12 to 20%. The solar ROI is given as a percentage, which means that the higher the ROI, the faster the system will pay you back and earn you a profit. An important thing to remember is: ROI isn't the same as the payback period; payback period represents the number of years it takes to recover the total In our most realistic scenario, we anticipate a 10% increase in installations to 655 GW in , with annual growth rates remaining in the low double digits between -, reaching 930 GW by the end of this outlook period. However, meeting the Global Solar Council's aspirational target of 8 TW The U.S. EIA (Energy Information Administration) is projected to see a 34% increase in solar power generation, adding 74 billion kWh in , followed by 18% rise (52 billion kWh) in .
