

## government procurement price of gel battery storage in Netherlands

When will a new battery storage scheme open in the Netherlands? The scheme is scheduled to open on Jan. 1, , and end in . The funding is part of a EUR416 million subsidy program that was announced last year. The Dutch government said it would allocate the funds from the climate package issued in , with the subsidies to facilitate the deployment of 160 MW to 330 MW of battery storage. Are batteries a barrier to energy storage in the Netherlands? Under the Electricity Act , generation is exempt from the payment of transmission costs, but consumption is not. This highlights one of the main barriers to energy storage in the Netherlands, as batteries currently pay more transmission costs than polluting wholesale consumers. What are the laws & regulations on energy storage in the Netherlands? No specific laws & regulations: In the Netherlands, energy storage is not described in Dutch laws and regulations as a specific item. Standard requirements: It has to meet standard requirements for production and consumption and some specific technologies that are part of the energy storage system must comply with standardisation. Are battery energy storage systems a positive development? A positive development, however, is that double taxation of battery energy storage systems (i.e. at the time of recharging and at the time of feed-into the grid) was abolished in 1 January . As a result of the Dutch net-metering scheme (salderingsregeling), home battery storage currently lags behind in development. The Dutch government has earmarked EUR100 million (\$106.7 million) of subsidies for the deployment of battery storage alongside PV projects. Renewable energy projects and storage projects ("behind the meter") may be subsidised through this programme if both elements (RES and BESS) are components of a single investment or if the storage is combined with an existing renewable energy generating facility. Several instruments: It possesses many instruments, such as subsidies and loans, which can be used, for example, by SMEs located in the eastern part of the Netherlands that are engaged in innovative energy storage. The EUR100 million (US\$106 million) allocation is part of a EUR416 million package for PV co-located battery energy storage system (BESS) technology that was initially to total EUR41.6 million a year, starting in , for ten years. Latest Netherlands Battery Tenders, Government Bids, RFP and other public procurement notices related to Battery from Netherlands. Users can register and get updated information on Netherlands Government Battery Tenders, RFQ, government contracts and eprocurement tenders. New Subsidy schemes for Battery Energy Storage Renewable energy projects and storage projects ("behind the meter") may be subsidised through this programme if both elements (RES and BESS) are components of a single investment or if the storage is combined Energy Storage in The Netherlands The EUR100 million (US\$106 million) allocation is part of a EUR416 million package for PV co-located battery energy storage system (BESS) technology that was initially to total EUR41.6 million a year, starting in , for Netherlands Battery Tenders, Bids and RFP Latest Netherlands Battery Tenders, Government Bids, RFP and other public procurement notices related to Battery from Netherlands.
