

Could battery storage be a game-changer for Egypt's energy sector? The integration of battery storage with solar PV is a game-changer for Egypt's energy sector, providing reliable and dispatchable renewable energy and reducing reliance on fossil fuels. It not only meets Egypt's current energy needs but also sets a precedent for future dispatchable hybrid renewable energy projects in the region." Will Egypt achieve 42 percent of renewables by 2030? Egypt aims to reach 42 per cent of renewables in its power mix by 2030. The solar power plant is expected to generate approximately 3,000 GWh per year of additional renewable power, which will enhance grid stability and manage peak demand. It will also reduce carbon dioxide emissions by up to 1.4 million metric tonnes annually. How does solar power work in Egypt? It takes Egypt's green energy transition to another level by harnessing the power of the sun, not just during the day but also at night, thanks to the combination of solar and battery storage. The project addresses the growing demand for electricity and reduces the need to import expensive fossil fuels. How does the EBRD invest in Egypt? The EBRD's areas of investment in Egypt include the financial sector, agribusiness and manufacturing and services, as well as infrastructure projects in the power, municipal water and wastewater service sectors, and contributions to upgrading the transport sector. How does BII financing work? BII financing includes a US\$ 100 million concessional loan and a US\$ 15 million returnable grant that helps lower the overall cost of the BESS part of the project, making it more financially viable and affordable, while attracting private-sector participation and creating models for future investments. EBRD, AfDB and BII support pioneering solar and battery storage. This is a major milestone in the implementation of the EU-Egypt Strategic Partnership. This particular project is a concrete example of a fruitful collaboration between the EU and the EBRD for supporting green transition in Egypt. Egypt secures \$479.1 mln for landmark Nagaa Hammadi solar, The financing covers 80 percent of the estimated capital expenditure of \$590 million, making it Egypt's first large-scale integrated solar and battery storage project. IFC, AMEA Power partner to launch Egypt's 1st utility-scale battery energy storage system (BESS), in partnership with AMEA Power and the Egyptian government. The project's First Utility-Scale Battery Storage Project Reaches The integration of battery storage enhances grid stability, allows for better integration of renewable energy sources, and supports Egypt's goal of achieving 42% renewables by 2030. EBRD, AfDB, and BII back Egypt in building solar and battery storage. BII will supply a \$100 million concessional loan and a \$15 million returnable grant, designed to improve the financial viability of the battery component and draw in private investors. EBRD, AfDB and BII support pioneering solar and battery storage. On completion, it will be the first integrated solar photovoltaic and battery storage project of this scale in Egypt, and a significant milestone in the country's energy transition. Scatec and AMEA Power Secure Financing for Major Battery Storage Project. These initiatives represent Egypt's first forays into large-scale battery storage, aiding in the diversification of the energy mix and the integration of renewable energy resources. Egypt's Pioneering Solar and Battery Storage Project Secures The project's emphasis on solar photovoltaic (PV) technology combined with advanced Battery Energy

Storage Systems (BESS) is particularly relevant, demonstrating how Egypt DigitalizationEgypt has developed a strategy for new and renewable energy to reach about 20%, through many projects and initiatives, in line with Egypt's Vision , as the following: Scatec Powers Egypt Aluminium with Major Solar and Battery Storage ProjectNorwegian renewable energy company Scatec ASA has signed a landmark 25-year Power Purchase Agreement (PPA) with Egypt Aluminium (EgyptAlum) to develop a 1.1 Egypt Green Hydrogen Vision Egypt aims to be one of the largest exporters of clean hydrogen in the region, this has become a major goal in light of global changes related to the energy sector, as well as global economic and environmental Egypt's Bold Economic Leap /: Powered by Egypt's Vision is set to drive stronger economic growth than originally expected, boosting expansion towards and beyond. Strategic investments, large-scale infrastructure projects, and Scatec and AMEA Power Secure Financing for Major Battery These initiatives represent Egypt's first forays into large-scale battery storage, aiding in the diversification of the energy mix and the integration of renewable energy Egypt incentivising green hydrogen projects: Egypt As part of Egypt's 'Vision ' long-term strategy agenda launched in February to incentivise the building of green hydrogen projects in Egypt, the Egyptian government has now issued Law No. 2 of (the Egypt's Cabinet to present document on strategic Egypt's Cabinet has announced issuing a research project that includes the proposed strategic orientations for the Egyptian economy during the third presidential term of LEVERAGING ENERGY STORAGE SYSTEMS IN MENAI. Executive Summary Renewable energy systems have been gaining momentum across MENA countries, driven by ambitious national energy targets, technology cost declines, and Cabinet's IDSC initiates national dialogue on strategic The Cabinet's Information and Decision Support Center (IDSC) has initiated the first comprehensive national dialogue sessions on the document that outlines the key strategic directions for the
