How many automotive lithium-ion batteries are there in Brazil? The flows of automotive lithium-ion batteries in Brazil It was estimated that new automotive LIBs were put on the market in new EC in Brazil, in (Figure S4). Will Li & Co supply the Brazilian EC market in ? Although the contents of Li and Co in LIBs are lower than the contents of Ni and graphite, the total predicted amounts of Li and Co (in weight) to supply the Brazilian market of EC in are still higher than the current Brazilian domestic production of such minerals (Table 1). Will graphite recycling increase revenues in Brazil in ? Revenues from electrode material recycling in Brazil may surpass US\$ 100 mi in . Technological development for graphite recycling may increase revenues in up to 11%.

1. Introduction In the past few years, the number of electric vehicles (EV) in the market has increased worldwide, pushed by the necessity of building a low-carbon economy. How many EOL LIBs are available for recycling in Brazil in ? When remanufacturing (strategy c) is included, EOL LIBs available for recycling in Brazil in are 150,000 (Fig. 4). It should be noted that the adoption of reuse and remanufacturing practices may considerably reduce the overall intake of primary raw materials. Which country produces lithium ion (Li) electrode active materials? In terms of LIBs electrode active materials, Brazil is amongst the top 10 producers in the world of Li, Ni, Mn and graphite (USGS ). In the case of Co, the mineral is produced in Brazil as a by-product of Ni mining. How many LIBs will be available for recycling in ? According to the waste management strategy adopted, the number of LIBs available for recycling changes drastically. For instance, for scenario 3, when only recycling is considered (management strategy a), 290,000 EOL LIBs could be available for recycling in .
