

## nickel manganese cobalt battery cost breakdown in Korea 2026

Lithium-ion (Li-ion) EV battery prices have decreased dramatically over the past few years, mainly due to the fall in prices of critical battery metals: Lithium, cobalt and nickel. For example, the price of cobalt has fallen from roughly \$70,000 per metric ton in to about \$30,000 in . South Korea's LG Energy Solution Ltd. plans to mass-produce mid-nickel, high-voltage lithium batteries as early as next year, one year ahead of schedule, as electric vehicle makers are increasingly adopting low-cost batteries to reduce EV prices, according to industry sources on Monday. Mid-nickel

Based on data from the Korea Mine Rehabilitation and Mineral Resources Corporation, lithium hydroxide sold for 106,290 yuan (\$16,487) per ton as of Oct. 1, up 193 percent from last year's average price. Nickel was \$17,800 per ton as of Oct. 5, up 29 percent. Cobalt was \$52,960 per ton as of Oct. 5

Nickel Manganese Cobalt (NMC) Battery Market By Battery Capacity (500 kWh, 500- kWh, - kWh, &gt; kWh); By Application (Electric Vehicles, Grid Energy Storage, UPS Systems, Portable Devices); By End-Use Industry (Automotive, Energy Storage Systems, Consumer Electronics, Industrial

These batteries contain 50-70% nickel in their NCM (nickel-cobalt-manganese) cathodes, striking a balance between energy density, cost, and thermal stability. By reducing costly nickel and cobalt content, SK On's new battery achieves cost efficiency without sacrificing energy output. The company

For instance, the article highlights that lithium nickel cobalt aluminum oxide (NCA) batteries have an average price of \$120.3 per kilowatt-hour (kWh), while lithium nickel cobalt manganese oxide (NCM) comes in slightly cheaper at \$112.7 per kWh. These batteries, rich in nickel, offer impressive
