The project is a grid-tied solar photovoltaic (PV) system and a battery energy storage system located near Coral Harbour and is designed to provide renewable energy, enhancing grid stability and sustainability to the New Providence grid. and bring significant cost savings. At the same time, the first wave of utility-scale solar projects is now being deployed. These include installations at Blue Hills, Coral Harbour, and CV Bethel, each with battery storage to stabilize the grid. For the first time, solar energy will play a meaningful role in current developments in the Energy Sector. The NEP - aims to encourage the further development of electricity GTDS services throughout The Bahamas, foster cost-effective pricing in relation to such services, promote the diversification of energy sources through the deployment of solar. The Bahamas, known for its crystal-clear waters, is making waves in energy storage innovation. With its recent Bahamas energy storage record projects, this island nation is rewriting the rules of sustainable power in paradise [2]. For decades, the Bahamas danced to the tune of imported power. The Bahamas Utilities Regulation and Competition Authority (URCA) has approved a landmark power purchase agreement (PPA) between Shell North America and Bahamas Power and Light (BPL) to construct a 132-MW solar plant and a 25-MW battery system on New Providence Island. This ambitious project is set to propel a 21st century economy, we need a 21st century power grid - a modern grid that is more efficient and cost effective, more reliable, capable of transmitting clean energy, and capable of withstanding hurricanes. For too long, high electricity prices and unreliable power have burdened the Bahamas. Securing The Bahamas Energy Future The project is a grid-tied solar photovoltaic (PV) system and a battery energy storage system located near Coral Harbour and is designed to provide renewable energy, enhancing grid stability and sustainability to the New Providence grid.
