

## successful bid price of backup power battery project in Bangladesh 203

How does the power sector support transport in Bangla-Desh?The power sector continues to support the ongoing electrifica-tion of transport in Bangla-desh, through various initia-tives undertaken by distribu-tion companies and the roll-out of an EV charging tariff. What will power demand look like in ?A 7% annual growth in power demand will lead to a maximum peak demand of 25,813MW in . With baseload power plants of more than 5,000MW, including nuclear, coming online soon and increased interest in renewable energy projects, the power system's capacity will likely cross 35,000MW in . How much does oil-fired power cost in Bangladesh?IEEFA's analysis shows that the average power generation cost from oil-fired plants was about 23 Bangladeshi Taka (Tk per kilowatt-hour (kWh) (US20&#162;/kWh) against the average generation cost of Tk11.33/kWh (US9.6&#162;/kWh) in the fiscal year (FY) -23. What are the challenges facing power plant development in Bangladesh?pport utility-scale renewablesLand acquisition is the most commonly cited challenge for power plant development in Bangladesh due to the count y's high population density. Bangladesh also caps land ownership at 100 bigha (approximately 13.4 hectares) with a sub-cap of 60 bigha o price hikes raise a big challenge for the energy and power sectors and indicate that Bangladesh needs to update operational and market patterns originally designed for the fossil fuel era. In its Power System Master Plan , the government pledges to increase power generation to 40,000 MW by , and under the Integrated Energy and Power Master Plan the total installed capacity needs to rise to 74.3 gigawatts (GW) by , which requires a huge investment.5 At present, around Despite government claims of 10,000 MW renewable energy projects in various stages of implementation, a Power Cell document indicates that only 4,000 MW worth of projects are fully planned by . According to the Sustainable and Renewable Energy Development Authority (SREDA), Bangladesh currently The Ceylon Electricity Board (CEB), Bangladesh's state-owned power utility, has launched a competitive bidding process for large-scale battery energy storage system (BESS) projects aimed at stabilizing the national grid as more intermittent renewable sources come online. According to the request et growing electricity demand. The levelized cost of electricity (LCOE) for a new utility-scale solar project in Bangladesh ranges from \$97-135/MWh today, compared to \$88-116/MWh for a combined cycle gas turbine (CCGT) and \$110- 50/MWh for a coal power plant. By , solar becomes the cheapest Bangladesh has made some progress over the last two decades in expanding its renewable energy capacity, but still has significant untapped potential. As an example, as of , renewable energy accounts for only 4.5% of Bangladesh's total installed power capacity of 22,215 MW, with solar power From FY2020-21 to FY2022-23, the BPDB registered a cumulative loss of Tk148.69 billion (US\$1.27 billion) even after receiving a hefty subsidy of Tk809.7 billion (US\$6.88 billion). With baseload power plants of more than 5,000MW coming online soon and increased interest in renewable energy projects Bidding for Bangladesh: The Suitability of Auctions for price hikes raise a big challenge for the energy and power sectors and indicate that Bangladesh needs to update operational and market patterns originally designed for the fossil fuel era. Renewable energy: 4,000 MW projects fully planned Despite government claims of 10,000 MW renewable

energy projects in various stages of implementation, a Power Cell document indicates that only 4,000 MW worth of projects are fully planned by . Bangladesh Invites Bids for 160MW Battery Storage to Support The Ceylon Electricity Board (CEB), Bangladesh's state-owned power utility, has launched a competitive bidding process for large-scale battery energy storage system (BESS) Power Sector at the Crossroads Bangladesh Other factors could also negate the effect of fuel price reduction such as higher-than-expected financing costs for fossil-fueled power assets or the introduction of a carbon price in Bangladesh Renewable Energy Sector Opportunities Bangladesh has made some progress over the last two decades in expanding its renewable energy capacity, but still has significant untapped potential. How to make Bangladesh's power sector sustainable The existing renewable energy tariff in Bangladesh is half the cost of electricity generated by oil-fired power plants. Solar power for daytime peak application and evening peak use, supported by two- to three-hour EU Global Technical Assistance Facility for Sustainable Energy The diagram above shows a 3X3 matrix describing the potential time horizon for the deployment of different energy storage applications in Bangladesh, as well as the level of interventions Bidding for Bangladesh: The Suitability of Auctions for Renewable Imported liquefied natural gas and coal price hikes raise a big challenge for the energy and power sectors and indicate that Bangladesh needs to update operational and Saft wins battery backup project from Shanghai Electric Group for Saft, the world's leading designer and manufacturer of high-tech industrial batteries, is supplying two large battery systems to Shanghai Electric Group Company Limited, Saft to supply batteries for backup power in Bangladesh plant Saft, a leading designer and manufacturer of high-tech industrial batteries, is supplying two large battery systems to Shanghai Electric Group Company Limited, one of China's largest Saudi Arabia Plans to Deploy 48GWh of Battery Storage by The four upcoming energy storage projects, all identical in scale, are strategically located within Saudi Arabia. As part of the Saudi Vision policy, the country Six new big battery projects emerge as winners of first Updated: Six new big battery projects named as winners of the federal government's first auction under the Capacity Investment Scheme.
