Are energy storage systems the backbone of India's utility-scale ESS auctions? Standalone Energy Storage Systems (ESS) are becoming the backbone of India's utility-scale ESS auctions, accounting for 64% of the total tenders issued between January and March alone, according to a new report by the Institute for Energy Economics and Financial Analysis (IEEFA) and JMK Research & Analytics. What is the Electricity Market Module? The Electricity Market Module is a submodule within the EIA's National Energy Modeling System, a computer-based energy supply modeling system used for the EIA's Annual Energy Outlook and other analyses. What are EPC costs based on a contracting approach? 1. Costs based on EPC contracting approach. Direct costs include equipment, material, and labor to construct the civil/structural, mechanical, and electrical/I&C components of the facility. Indirect costs include engineering, construction management, start-up, and commissioning. EPC fees are applied to the sum of direct and indirect costs. 2. What is the difference between EPC materials & owner services? Materials include all construction materials associated with the EPC scope of work, material freight costs, and consumables during construction. Owner's services include project development, studies, permitting, legal, owner's project management, owner's engineering, and owner's start-up and commissioning costs.
